

# Python Text File Handling Practice

Using 'r', 'w', and 'a' Modes

## Instructions for Students

- Use only **text files (.txt)** for all questions.
- Do NOT use advanced libraries.
- Use proper file closing or the **with** statement.
- Assume the file is in the same directory as your Python file unless stated otherwise.
- Read each scenario carefully before coding.

## Section A: Writing Files ('w' Mode)

### Question 1: Student Registration System

You are building a simple student registration system.

**Task:**

- Ask the user for student name, roll number, and course.
- Write this data into a file called **students.txt**.
- Each student record should be written on a new line.

### Question 2: Daily Expense Logger

You want to record daily expenses.

**Task:**

- Ask the user how many expenses they want to enter.
- For each expense, ask for description and amount.
- Save all expenses into **expenses.txt**.

## Section B: Reading Files ('r' Mode)

### Question 3: Reading Student Records

Assume `students.txt` already exists and contains student data.

**Task:**

- Open the file in read mode.
- Display all student records on the screen.

### Question 4: Counting Lines in a File

You are given a text file called `notes.txt`.

**Task:**

- Read the file.
- Count how many lines it contains.
- Display the total line count.

### Question 5: Search in a Log File

A system log file `log.txt` contains multiple messages.

**Task:**

- Ask the user for a keyword.
- Display all lines that contain that keyword.

## Section C: Appending Files ('a' Mode)

### Question 6: Add New Students

You already have `students.txt`.

**Task:**

- Ask the user for a new student's details.
- Append the data to the file without deleting old records.

## Question 7: Attendance Tracker

Each day, attendance needs to be added.

**Task:**

- Ask for date and list of present students.
- Append this data to `attendance.txt`.

## Section D: Mixed File Operations

### Question 8: Simple Feedback System

**Task:**

- Append user feedback into `feedback.txt`.
- After writing, read the file and display all feedbacks.

### Question 9: Backup Creator

You are given `data.txt`.

**Task:**

- Read the content of `data.txt`.
- Write the same content into `backup.txt`.
